

Analysis of Management Options for the Area 2C and 3A Charter Halibut Fisheries for 2013

For the North Pacific Fishery Management Council
December 2012

Scott Meyer
Alaska Department of Fish and Game

Overview

- ▶ Area 2C
 - ▶ Requested analyses:
 - ▶ Reverse slot limits (e.g. U45O68)
 - ▶ Maximum size limit (L_{max}) with annual limit of one fish $> L_{max}$

- ▶ Area 3A
 - ▶ Crew harvest prohibition

Goal

- ▶ Identify viable management measures for 2013 that constrain harvest under possible GHLs (IPHC “blue line” alternatives):
 - ▶ Area 2C - 0.788 M lb
 - ▶ Area 3A - 2.373 M lb

Area 2C – Harvest Forecasts

- ▶ ARIMA model identification and evaluation
- ▶ Projected using 2011-2012 rate of change
- ▶ Forecast effort and apportion using annual harvest distributions (logbook data)

Area 2C – Harvest Forecasts

Method	Forecast (no. fish)	Std Err
Time Series	44,352	8,696
Continued rate of change	54,908	12,596
Forecast effort and annual harvest distribution	47,148	none

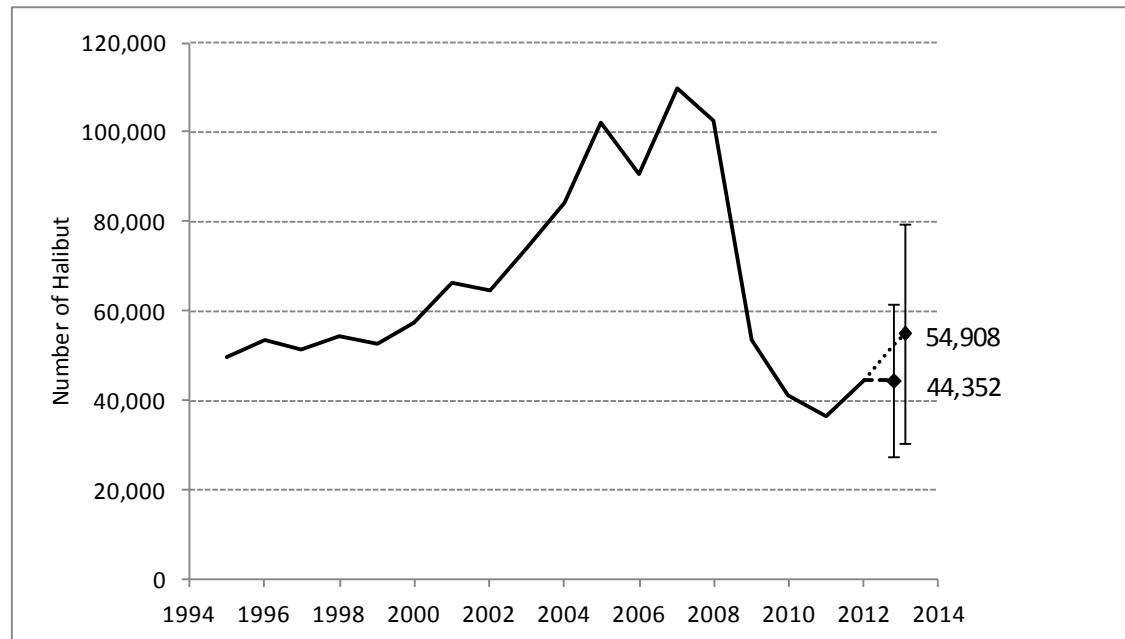

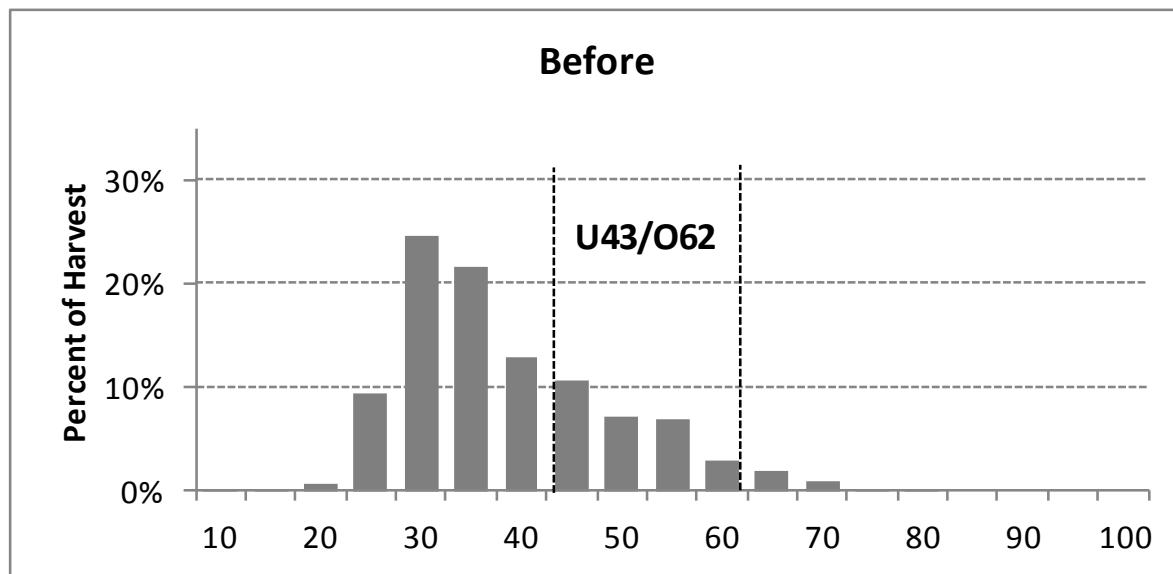

Table 1, Figure 1

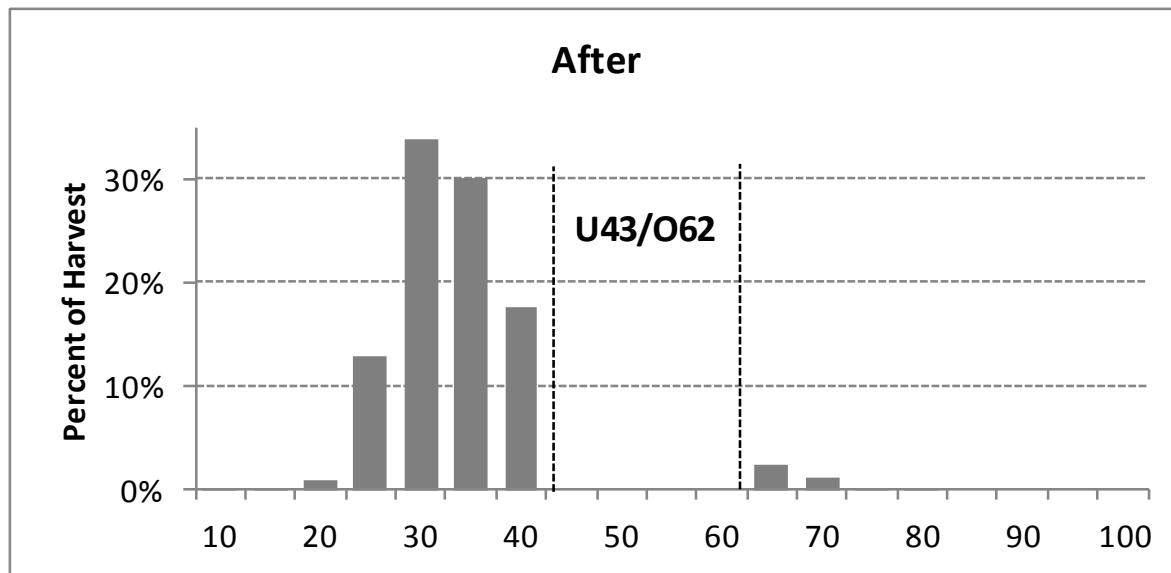

Area 2C – Reverse Slot Limit

- ▶ Assume harvest will have length distribution similar to 2010
- ▶ Assume size limit has no effect on number of fish harvested
Fish caught in the protected slot will be released and replaced in the harvest with legal-size fish, in same relative distribution as in 2010.

Area 2C – Reverse Slot Limit

- ▶ Assume harvest will have length distribution similar to 2010
- ▶ Assume size limit has no effect on number of fish harvested
Fish caught in the protected slot will be released and replaced in the harvest with legal-size fish, in same relative distribution as in 2010.

Area 2C – Reverse Slot Limit

Area 2C - Max Size Limit + Annual Limit

- ▶ No experience or data/information from regulation
- ▶ Assumptions:

Scenario	Number of halibut $> L_{max}$	Average weight of halibut $> L_{max}$	Average weight of halibut $\leq L_{max}$
A	Every angler harvests one fish.		Equal to predicted weight of a halibut of length L_{max}
B			Equal to average weight of halibut $\leq L_{max}$ in 2010.
C	Proportion of anglers that keep one equals the proportion of harvest in 2010 that was $> L_{max}$	Equal to average weight of halibut $> L_{max}$ in 2010.	Equal to predicted weight of a halibut of length L_{max}
D			Equal to average weight of halibut $\leq L_{max}$ in 2010.

Area 2C - Max Size Limit + Annual Limit

- ▶ Yield projections only used harvest forecast of 47,148.
- ▶ Yield varied substantially among the four scenarios.
